

## Falls Creek Falls

6 miles total, 1,200' gained

Park in the lot at the end of Rd. 057. Proceed on trail 152A straight ahead, passing by the 152 spur on the left (the return route).

Cross the suspension bridge after a half mile or so, and then after less than a mile further, go straight by a connector trail on the left (take this connector on the return).

The falls viewpoint dead ends at about 1 ½ miles from the lot.

For the return, retrace back on 152A until you reach the connector trail. Go right.

Proceed on this short, uphill trail to the junction with 152. Go right again.

Follow 152 uphill for maybe a mile, and then it levels off. Look for side trails at this point that take you a few steps to the right and a large bluff and views of the top tier of falls.

Turn back the way you came, except now proceed past the connector trail, staying on 152.

152 continues on for about 2 miles. Go left at a small bridge (152 looks abandoned straight ahead), and then immediately left again after crossing the bridge (an abandoned lot is to the right).

The lot is about ½ mile after making the left after the bridge.
